

**REFLECTIONS Calibration Preventive Maintenance (CPM) System** provides comprehensive processes to check the accuracy of an instrument and allows traceability of the measurement. Reflection CPM ensures overall Calibration activities through Automated System where the software manages and stores all Instrument and Calibration data. It includes the planning and scheduling instruments for calibration, email alerts & notifications, execution, generation of reports, certificates and Status labels.

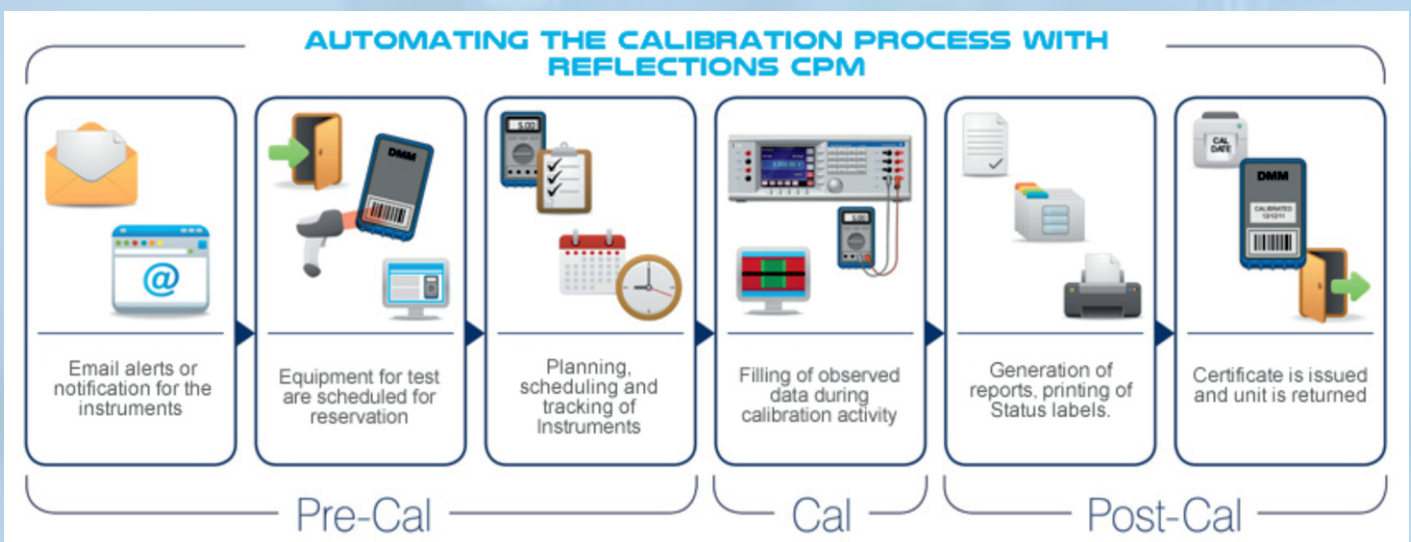

Reflection CPM manages all calibration related activities automatically which includes:

- ✓ Planning, scheduling and tracking instruments for calibration.
- ✓ Email alerts or notification for the instruments which are due for calibration.
- ✓ Filling observed data in to software during calibration activity.
- ✓ Generation of reports, certificates and Status labels.
- ✓ The automatic maintenance of all the calibration related formats.
- ✓ CPM generates the status labels & Certificate.

Other practices that ensures the quality in pharmaceutical industry:

- ✓ Inspection, measuring and test equipment - 21 CFR 820.72.
- ✓ Acceptance Activities - 21 CFR 820.80 and 21 CFR 820.86.

**Reflections CPM** can work with industry standard hardware.

All software specifications and implementation reflects the approach to comply all GMP & GAMP5 requirement and Health regulatory norms, [e.g. CFR 21.211 (US); Orange Guideline (UK); Schedule M of drug and cosmetic act (India)] of all countries where the company wants to sell its product.
